## RF PhotoMOS (AQS225S)

**Lower output capacitance  
and on resistance.  
High speed switching.  
(Turn on time: 0.1ms,  
Turn off time: 0.03ms).**

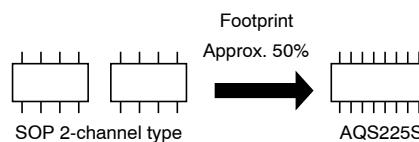

## FEATURES

**1. 4-channel (4 Form A) of RF PhotoMOS Relays**

**2. SO package 16-pin type in super miniature design**

The device comes in a super-miniature SO package measuring (W)10.37 × (L)4.4 × (H)2.1mm (W) .408×(L).173× (H).083inch— approx. 50% of the footprint size of 8-pin(2-channel) type.

**3. Applicable for 4 Form A use, as well as 4 independent 1 Form A**

**4. Low capacitance between output terminals ensure high response speed:**

The capacitance between output terminals is small, typically 4.5pF. This enables for a fast operation speed of 0.1ms(typ.).

**5. Low-level off state leakage current**

**6. Controls low-level analog signals**

PhotoMOS relays feature extremely low closed-circuit offset voltage to enable control of low-level analog signals without distortion
