

## Isolated Profibus RS-485 Transceiver with Integrated Transformer Driver

Check for Samples: [ISO1176T](#)

### FEATURES

- 3000V<sub>RMS</sub> / 4242V<sub>PK</sub> Isolation
- Meets or Exceeds the Requirements of EN 50170 and TIA/EIA RS-485
- Signaling Rates up to 40 Mbps
- Easy Isolated Power Design with Integrated Transformer Driver
- Typical Efficiency > 60% (I<sub>LOAD</sub> = 100 mA) - see [sluu471](#)
- Differential Output exceeds 2.1V (54Ω Load)
- Low Bus Capacitance 10pF (MAX)
- 50kV/μs Typical Transient Immunity
- UL 1577, IEC 60747-5-2 (VDE 0884, Rev. 2)

### Approvals Pending

- Fail-safe Receiver for Bus Open, Short, or Idle

### APPLICATIONS

- Profibus®
- Factory Automation
- Networked Sensors
- Motor/motion Control
- HVAC and Building Automation Networks
- Networked Security Stations

### DESCRIPTION

The ISO1176T is an isolated differential line transceiver with integrated oscillator outputs that provide the primary voltage for an isolation transformer. The device is ideal for long transmission lines because the ground loop is broken to allow the device to operate with a much larger common-mode voltage range. The symmetrical isolation barrier of each device is tested to provide 4242V<sub>PK</sub> of isolation per VDE for 60 seconds between the line transceiver and the logic-level interface.

The galvanically isolated differential bus transceiver is an integrated circuit designed for bi-directional data communication on multipoint bus-transmission lines. The transceiver combines a galvanically isolated differential line driver and differential input line receiver. The driver has an active-high enable with isolated enable-state output on the ISODE pin (pin 10) to facilitate direction control. The driver differential outputs and the receiver differential inputs connect internally to form a differential input/output (I/O) bus port that is designed to offer minimum loading to the bus whenever the driver is disabled or V<sub>CC2</sub> = 0.

Any cabled I/O can be subjected to electrical noise transients from various sources. These noise transients can cause damage to the transceiver and/or near-by sensitive circuitry if they are of sufficient magnitude and duration. The ISO1176T can significantly reduce the risk of data corruption and damage to expensive control circuits.

The device is characterized for operation over the ambient temperature range of –40°C to 85°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Profibus is a registered trademark of Profibus International.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

### DEVICE INFORMATION

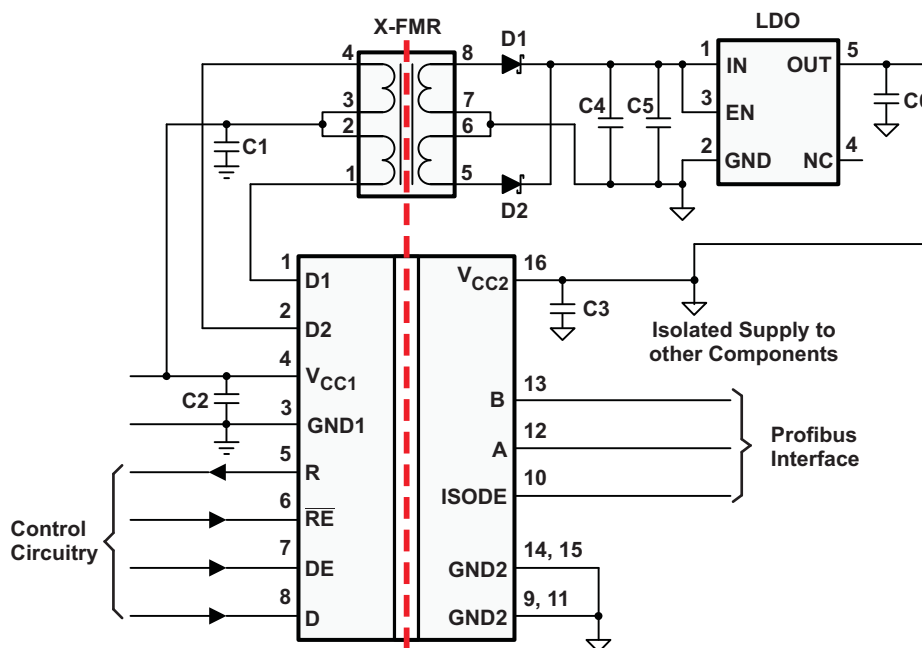

Figure 1. Typical Applications

### PIN DESCRIPTIONS

NAME	PIN #	FUNCTION
D1	1	Transformer Driver Terminal 1, Open Drain Output
D2	2	Transformer Driver Terminal 2, Open Drain Output
GND1	3	Logic-side Ground
V <sub>CC1</sub>	4	Logic-side Power Supply
R	5	Receiver Output
$\overline{RE}$	6	Receiver Enable Input. This pin has complementary logic.
DE	7	Driver Enable Input
D	8	Driver Input
GND2	9, 11, 14, 15	Bus-side Ground. All pins are internally connected.
ISODE	10	Bus-side Driver Enable Output Status
A	12	Non-inverting Driver Output / Receiver Input
B	13	Inverting Driver Output / Receiver Input
V <sub>CC2</sub>	16	Bus-side Power Supply

**ABSOLUTE MAXIMUM RATINGS<sup>(1)</sup>**

				VALUE	UNIT	
$V_{CC1}$ , $V_{CC2}$	Input supply voltage <sup>(2)</sup>			-0.5 to 7	V	
$V_O$	Voltage at any bus I/O terminal			-9 to 14	V	
	Voltage at D1, D2			14	V	
$V_I$	Voltage input at D, DE or $\overline{RE}$ terminal			-0.5 to 7	V	
$I_O$	Receiver output current			$\pm 10$	mA	
$I_{D1}$ , $I_{D2}$	Transformer Driver Output Current			450	mA	
ESD	Electrostatic Discharge	Human Body Model	JEDEC Standard 22, Test Method A114-C.01	Bus pins to GND1	$\pm 6$	kV
				Bus pins to GND2	$\pm 10$	
		all pins		$\pm 4$		
		Charged Device Model	JEDEC Standard 22, Test Method C101	all pins		$\pm 1.5$
Machine Model	ANSI/ESDS5.2-1996					$\pm 200$
$T_J$	Maximum junction temperature			170	$^{\circ}\text{C}$	
$T_{STG}$	Storage temperature			-65 to 150	$^{\circ}\text{C}$	

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to the referenced network ground terminal and are peak voltage values.

**RECOMMENDED OPERATING CONDITIONS**

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
$V_{CC}$	Logic side supply voltage, $V_{CC1}$ (with respect to GND1)		3		5.5	V
	Bus side supply voltage, $V_{CC2}$ (with respect to GND2)		4.75		5.25	
$V_{CM}$	Voltage at either bus I/O terminal		A, B		12	V
$V_{IH}$	High-level input voltage		$\overline{RE}$		$V_{CC1}$	V
			D, DE	$0.7 V_{CC1}$		
$V_{IL}$	Low-level input voltage		$\overline{RE}$	0	0.8	V
			D, DE		$0.3 V_{CC1}$	
$V_{ID}$	Differential input voltage		A with respect to B		12	V
$I_O$	Output Current		RS-485 driver		70	mA
			Receiver		8	
$T_A$	Ambient temperature				85	$^{\circ}\text{C}$
$T_J$	Operating junction temperature				150	$^{\circ}\text{C}$
$1 / t_{UI}$	Signaling Rate				40	Mbps

## SUPPLY CURRENT

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$I_{CC1}^{(1)}$	Logic-side quiescent supply current	$V_{CC1} = 3.3\text{ V} \pm 10\%$ , DE, $\overline{RE} = 0\text{V}$ or $V_{CC1}$ , No load		4.5	8	mA
		$V_{CC1} = 5\text{ V} \pm 10\%$ , DE, $\overline{RE} = 0\text{V}$ or $V_{CC1}$ , No load		7	11	mA
$I_{CC2}^{(1)}$	Bus-side quiescent supply current	$V_{CC2} = 5\text{ V} \pm 5\%$ , DE, $\overline{RE} = 0\text{V}$ or $V_{CC1}$ , No load		13.5	18	mA

(1)  $I_{CC1}$  and  $I_{CC2}$  are measured when device is connected to external power supplies. D1 and D2 are disconnected from external transformer.

## ISODE-PIN ELECTRICAL CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{OH}$	High-level output voltage	$I_{OH} = -8\text{mA}$	$V_{CC2} - 0.8$	4.6		V
		$I_{OH} = -20\mu\text{A}$	$V_{CC2} - 0.1$	5		
$V_{OL}$	Low-level output voltage	$I_{OL} = 8\text{mA}$		0.2	0.4	V
		$I_{OL} = 20\mu\text{A}$		0	0.1	

## RS-485 DRIVER ELECTRICAL CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{OD}$	Open-circuit differential output voltage	$ V_A - V_B $ , See <a href="#">Figure 2</a>	1.5		$V_{CC2}$	V
$ V_{OD(SS)} $	Steady-state differential output voltage magnitude	See <a href="#">Figure 3</a> and <a href="#">Figure 7</a>	2.1			V
		See <a href="#">Figure 4</a> , Common-mode loading with $V_{test}$ from $-7\text{V}$ to $+12\text{V}$	2.1			
$ \Delta V_{OD(SS)} $	Change in steady-state differential output voltage between logic states	See <a href="#">Figure 5</a> and <a href="#">Figure 6</a> , $R_L = 54\Omega$	-0.2		0.2	V
$V_{OC(SS)}$	Steady-state common-mode output voltage	See <a href="#">Figure 5</a> and <a href="#">Figure 65</a> , $R_L = 54\Omega$	2		3	V
$\Delta V_{OC(SS)}$	Change in steady-state common-mode output voltage		-0.2		0.2	
$V_{OC(pp)}$	Peak-to-peak common-mode output voltage		0.5			
$V_{OD(ring)}$	Differential output voltage over and under shoot	See <a href="#">Figure 7</a> and <a href="#">Figure 10</a>			10%	$V_{OD(pp)}$
$I_I$	Input current	D, DE at 0V or $V_{CC1}$	-10		10	$\mu\text{A}$
$I_{O(OFF)}$	Power-off output current	$V_{CC2} = 0\text{ V}$	See receiver input current			
$I_{OZ}$	High-impedance output current	DE at 0V				
$I_{OS(P)}$	Peak short-circuit output current	See <a href="#">Figure 9</a> , DE at $V_{CC1}$	$V_{OS} = -7\text{V}$ to $12\text{V}$	-250	250	mA
$I_{OS(SS)}$	Steady-state short-circuit output current		$V_{OS} = 12\text{V}$ , D at GND1		135	
			$V_{OS} = -7\text{V}$ , D at $V_{CC1}$	-135		
$C_{OD}$	Differential output capacitance		See receiver $C_{IN}$			
CMTI	Common-mode transient immunity	See <a href="#">Figure 20</a>	25			kV/ $\mu\text{s}$

## RS-485 DRIVER SWITCHING CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{PLH}, t_{PHL}$	Prop delay time	$V_{CC1} = 5V \pm 10\%$ , $V_{CC2} = 5V \pm 5\%$		23	35	ns
$t_{sk(p)}$	Pulse skew ( $ t_{PHL} - t_{PLH} $ )			2	5	
$t_{PLH}, t_{PHL}$	Prop delay time	$V_{CC1} = 3.3V \pm 10\%$ , $V_{CC2} = 5V \pm 5\%$		25	40	ns
$t_{sk(p)}$	Pulse skew ( $ t_{PHL} - t_{PLH} $ )			2	5	
$t_r$	Differential output signal rise time	See Figure 10		2	3	ns
$t_f$	Differential output signal fall time			2	3	
$t_{pDE}$	DE to ISODE prop delay	See Figure 14			30	ns
$t_t(MLH), t_t(MHL)$	Output transition skew	See Figure 11			1	ns
$t_p(AZH), t_p(BZH),$ $t_p(AZL), t_p(BZL)$	Propagation delay, high-impedance-to-active output	See Figure 12 and Figure 13, $C_L = 50\text{pf}$ , $\overline{RE}$ at 0 V			80	ns
$t_p(AHZ), t_p(BHZ),$ $t_p(ALZ), t_p(BLZ)$	Propagation delay, active-to-high-impedance output				80	
$ t_p(AZL) - t_p(BZH) $ $ t_p(AZH) - t_p(BZL) $	Enable skew time			0.55	1.5	ns
$t_{(CFB)}$	Time from application of short-circuit to current fold back	See Figure 9		0.5		$\mu\text{s}$
$t_{(TSD)}$	Time from application of short-circuit to thermal shutdown	See Figure 9, $T_A = 25^\circ\text{C}$		100		$\mu\text{s}$

## RECEIVER ELECTRICAL CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT	
$V_{IT(+)}$	Positive-going input threshold voltage	See Figure 16		-80	-10	mV	
$V_{IT(-)}$	Negative-going input threshold voltage			-200	-120		
$V_{hys}$	Hysteresis voltage ( $V_{IT+} - V_{IT-}$ )			25			
$V_{OH}$	High-level output voltage	$V_{CC1} = 3.3V \pm 10\%$ and $V_{CC2} = 5V \pm 5\%$	$V_{ID} = 200\text{ mV}$ , See Figure 16	$I_{OH} = -8\text{mA}$	$V_{CC1} - 0.4$	3	V
$V_{OL}$	Low-level output voltage			$I_{OH} = -20\mu\text{A}$	$V_{CC1} - 0.1$	3.3	
$V_{OH}$	High-level output voltage	$V_{CC1} = 5V \pm 10\%$ and $V_{CC2} = 5V \pm 5\%$	$V_{ID} = -200\text{ mV}$ , See Figure 16	$I_{OL} = 8\text{mA}$	$V_{CC1} - 0.8$	4.6	V
$V_{OL}$	Low-level output voltage			$I_{OL} = 20\mu\text{A}$	$V_{CC1} - 0.1$	5	
$I_A, I_B$	Bus pin input current	$V_I = -7\text{ or }12\text{V}$ , Other input = 0 V	$V_{CC2} = 4.75\text{V}$ or $5.25\text{V}$	-160	200	$\mu\text{A}$	
$I_{A(off)}, I_{B(off)}$							$V_{CC2} = 0\text{V}$
$I_I$	Receiver enable input current	$\overline{RE} = 0\text{ V}$		-50	50	$\mu\text{A}$	
$I_{OZ}$	High-impedance state output current	$\overline{RE} = V_{CC1}$		-1	1	$\mu\text{A}$	
$R_{ID}$	Differential input resistance	A, B		60		k $\Omega$	
$C_{ID}$	Differential input capacitance	Test input signal is a 1MHz sine wave with 1Vpp amplitude. CD is measured across A and B.		7	10	pF	
CMR	Common mode rejection	See Figure 19		4		V	

## RECEIVER SWITCHING CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$t_{PLH}$ , $t_{PHL}$	Propagation delay time	See Figure 16		50	65	ns
$t_{sk(p)}$	Pulse skew ( $ t_{PHL} - t_{PLH} $ )			2	5	
$t_{PLH}$ , $t_{PHL}$	Propagation delay time			53	70	
$t_{sk(p)}$	Pulse skew ( $ t_{PHL} - t_{PLH} $ )			2	5	
$t_r$	Output signal rise time		2	4		
$t_f$	Output signal fall time		2	4		
$t_{PZH}$	Propagation delay, high-impedance-to-high-level output	DE at $V_{CC1}$ , See Figure 17		13	25	
$t_{PHZ}$	Propagation delay, high-level-to-high-impedance output			13	25	
$t_{PZL}$	Propagation delay, high-impedance-to-low-level output	DE at $V_{CC1}$ , See Figure 18		13	25	
$t_{PLZ}$	Propagation delay, low-level-to-high-impedance output			13	25	

## TRANSFORMER DRIVER CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$f_{OSC}$	Oscillator frequency	$V_{CC1} = 5V \pm 10\%$ , D1 and D2 connected to Transformer	350	450	610	kHz
		$V_{CC1} = 3.3V \pm 10\%$ , D1 and D2 connected to Transformer	300	400	550	
$R_{ON}$	Switch on resistance	D1 and D2 connected to 50 $\Omega$ pull-up resistors		1	2.5	$\Omega$
$t_{r,D}$	D1, D2 output rise time	$V_{CC1} = 5V \pm 10\%$ , See Figure 21, D1 and D2 connected to 50 $\Omega$ pull-up resistors	30	80	110	ns
		$V_{CC1} = 3.3V \pm 10\%$ , See Figure 21, D1 and D2 connected to 50 $\Omega$ pull-up resistors	30	70	110	
$t_{f,D}$	D1, D2 output fall time	$V_{CC1} = 5V \pm 10\%$ , See Figure 21, D1 and D2 connected to 50 $\Omega$ pull-up resistors	20	55	70	ns
		$V_{CC1} = 3.3V \pm 10\%$ , See Figure 21, D1 and D2 connected to 50 $\Omega$ pull-up resistors	40	80	140	
$f_{St}$	Startup frequency	$V_{CC1} = 1.9V$ , D1 and D2 connected to Transformer		230		kHz
$t_{BBM}$	Break before make time delay	$V_{CC1} = 5V \pm 10\%$ , See Figure 21, D1 and D2 connected to 50 $\Omega$ pull-up resistors	12	38	75	ns
		$V_{CC1} = 3.3V \pm 10\%$ , See Figure 21, D1 and D2 connected to 50 $\Omega$ pull-up resistors	100	140	200

## IEC INSULATION AND SAFETY RELATED SPECIFICATIONS FOR 16-DW PACKAGE

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
L(I01)	Minimum air gap (Clearance) <sup>(1)</sup>	Shortest terminal to terminal distance through air	8.3			mm
L(I02)	Minimum external tracking (Creepage) <sup>(1)</sup>	Shortest terminal to terminal distance across the package surface	8.1			mm
CTI	Tracking resistance (Comparative Tracking Index)	DIN IEC 60112 / VDE 0303 Part 1	400			V
	Minimum Internal Gap (Internal Clearance)	Distance through the insulation	0.008			mm
R <sub>IO</sub>	Isolation resistance	Input to output, V <sub>IO</sub> = 500 V, all pins on each side of the barrier tied together creating a two-terminal device		>10 <sup>12</sup>		Ω
C <sub>IO</sub>	Barrier capacitance Input to output	V <sub>I</sub> = V <sub>CC</sub> /2 + 0.4 sin(2πft), f = 1MHz, V <sub>CC</sub> = 5 V		2		pF
C <sub>I</sub>	Input capacitance to ground	V <sub>I</sub> = 0.4 sin(2πft), f = 1MHz		2		pF
P <sub>D</sub>	Maximum device power dissipation	V <sub>CC1</sub> = 5.5V, V <sub>CC2</sub> = 5.25V, T <sub>J</sub> = 150°C, C <sub>L</sub> = 50pf, R <sub>L</sub> = 54Ω Input a 20MHz 50% duty cycle square wave			719	mW

(1) Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to make sure that the mounting pads of the isolator on the printed circuit board do not reduce this distance.

Creepage and clearance on a printed circuit board become equal according to the measurement techniques shown in the Isolation Glossary. Techniques such as inserting grooves and/or ribs on a printed circuit board are used to help increase these specifications

### IEC 60664-1 RATINGS TABLE

PARAMETER	TEST CONDITIONS	SPECIFICATION
Basic isolation group	Material group	II
Installation classification	Rated mains voltage ≤ 150V <sub>rms</sub>	I-IV
	Rated mains voltage ≤ 300V <sub>rms</sub>	I-III
	Rated mains voltage ≤ 400V <sub>rms</sub>	I-II

Basic Insulation Maximum Transient Overvoltage, 4242 V <sub>PK</sub> Maximum Surge Voltage, 4242 V <sub>PK</sub> Maximum Working Voltage, 566 V <sub>PK</sub>	Single / Basic Isolation Voltage, 2500 V <sub>RMS</sub> <sup>(1)</sup>
File Number: Pending	File Number: Pending

(1) Production tested  $\geq 3000 V_{rms}$  for 1 second in accordance with UL 1577.

## IEC SAFETY LIMITING VALUES

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the IO can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier potentially leading to secondary system failures.

PARAMETER	TEST CONDITIONS		MIN	TYP	MAX	UNIT
I <sub>S</sub> Safety input, output, or supply current	DW-16	$\theta_{JA} = 76^{\circ}\text{C/W}$ , $V_I = 5.5\text{ V}$ , $T_J = 170^{\circ}\text{C}$ , $T_A = 25^{\circ}\text{C}$			347	mA
T <sub>S</sub> Maximum case temperature	DW-16				150	$^{\circ}\text{C}$

The safety-limiting constraint is the absolute maximum junction temperature specified in the absolute maximum ratings table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the Thermal Characteristics table is that of a device installed on a High-K Test Board for Leaded Surface Mount Packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

## THERMAL INFORMATION

THERMAL METRIC <sup>(1)</sup>		ISO1176T	UNITS
		DW-16	
$\theta_{JA}$	Junction-to-ambient thermal resistance	76	$^{\circ}\text{C/W}$
$\theta_{JC(top)}$	Junction-to-case(top) thermal resistance	37.9	
$\theta_{JB}$	Junction-to-board thermal resistance	44.6	
$\psi_{JT}$	Junction-to-top characterization parameter	12.1	
$\psi_{JB}$	Junction-to-board characterization parameter	37.9	
$\theta_{JC(bottom)}$	Junction-to-case(bottom) thermal resistance	n/a

ISO1176T Reference Design (SLLU471) is available to provide complete isolated data and power solution.

TRANSIENT VOLTAGES

Isolation of a circuit insulates it from other circuits and earth so that noise develops across the insulation rather than circuit components. The most common noise threat to data-line circuits is voltage surges or electrical fast transients that occur after installation and the transient ratings of ISO1176T are sufficient for all but the most severe installations. However, some equipment manufacturers use their ESD generators to test transient susceptibility of their equipment and can exceed insulation ratings. ESD generators simulate static discharges that may occur during device or equipment handling with low-energy but high voltage transients.

Figure 31 models the ISO1176T bus IO connected to a noise generator.  $C_{IN}$  and  $R_{IN}$  is the device and any other stray or added capacitance or resistance across the A or B pin to GND2,  $C_{ISO}$  and  $R_{ISO}$  is the capacitance and resistance between GND1 and GND2 of ISO1176T plus those of any other insulation (transformer, etc.), and we assume stray inductance negligible. From this model, the voltage at the isolated bus return is

$V_{GND2} = V_N \frac{Z_{ISO}}{Z_{ISO} + Z_{IN}}$  and will always be less than 16 V from  $V_N$ . If ISO1176T is tested as a stand-alone device,  $R_{IN} = 6 \times 10^4 \Omega$ ,  $C_{IN} = 16 \times 10^{-12} \text{ F}$ ,  $R_{ISO} = 10^9 \Omega$  and  $C_{ISO} = 10^{-12} \text{ F}$ .

Note from Figure 31 that the resistor ratio determines the voltage ratio at low frequency and it is the inverse capacitance ratio at high frequency. In the stand-alone case and for low frequency,

$$\frac{V_{GND2}}{V_N} = \frac{R_{ISO}}{R_{ISO} + R_{IN}} = \frac{10^9}{10^9 + 6 \times 10^4}$$

or essentially all of noise appears across the barrier. At high frequency,

$$\frac{V_{GND2}}{V_N} = \frac{\frac{1}{C_{ISO}}}{\frac{1}{C_{ISO}} + \frac{1}{C_{IN}}} = \frac{1}{1 + \frac{C_{ISO}}{C_{IN}}} = \frac{1}{1 + \frac{1}{16}} = 0.94$$

and 94% of  $V_N$  appears across the barrier. As long as  $R_{ISO}$  is greater than  $R_{IN}$  and  $C_{ISO}$  is less than  $C_{IN}$ , most of transient noise appears across the isolation barrier, as it should.

We recommend the reader not test equipment transient susceptibility with ESD generators or consider product claims of ESD ratings above the barrier transient ratings of an isolated interface. ESD is best managed through recessing or covering connector pins in a conductive connector shell and installer training.

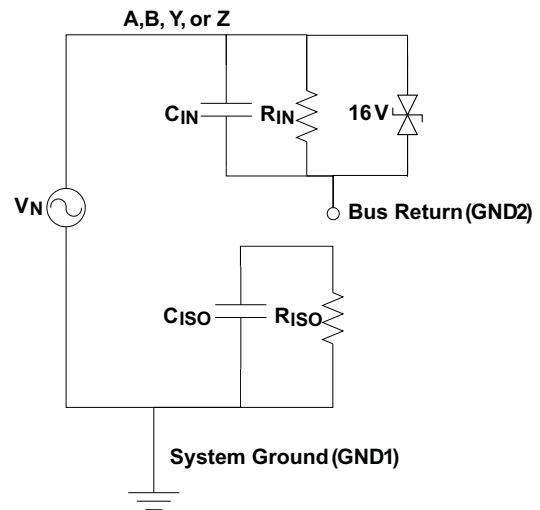

Figure 31. Noise Model

## REVISION HISTORY

Changes from Revision initial (October 2010) to Revision A	Page
• Updated transformer driver characteristics .....	6
• Added Thermal Table data .....	14
Changes from Revision A (December 2010) to Revision B	Page
• Changed the Steady-state short-circuit output current - Test Conditions and values. ....	4
• Changed the Oscillator frequency values .....	6
• Changed the D1, D2 output rise time values .....	6
Changes from Revision B (December 2010) to Revision C	Page
• Added a Typ value of 23ns to Prop delay time for $V_{CC1} = 5V$ in the RS-485 DRIVER SWITCHING CHARACTERISTIC table .....	5
• Added a Typ value of 25ns to Prop delay time for $V_{CC1} = 3.3V$ in the RS-485 DRIVER SWITCHING CHARACTERISTIC table .....	5
• Deleted $R_{OFF}$ from the TRANSFORMER DRIVER CHARACTERISTICS table .....	6
• Changed $\theta_{JA} = 212^{\circ}C/W$ To: $\theta_{JA} = 76^{\circ}C/W$ , Changed the $I_S$ Max value From: 128mA To: 347mA, and changed paragraph two in the IEC SAFETY LIMITING VALUES section .....	14
• Changed <a href="#">Figure 22</a> .....	15
Changes from Revision C (February 2011) to Revision D	Page
• Added <a href="#">Figure 1</a> .....	2
• Moved the Pin Description closer to the Pin drawing .....	2

**PACKAGING INFORMATION**

Orderable Device	Status <sup>(1)</sup>	Package Type	Package Drawing	Pins	Package Qty	Eco Plan <sup>(2)</sup>	Lead/ Ball Finish	MSL Peak Temp <sup>(3)</sup>	Samples (Requires Login)
ISO1176TDW	ACTIVE	SOIC	DW	16	40	TBD	Call TI	Call TI	
ISO1176TDWR	ACTIVE	SOIC	DW	16	2000	TBD	Call TI	Call TI	

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DW (R-PDSO-G16)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in inches (millimeters). Dimensioning and tolerancing per ASME Y14.5M-1994.
  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
  - D. Falls within JEDEC MS-013 variation AA.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
