UA7900 SERIES

THREE-TERMINAL FIXED NEGATIVE VOLTAGE REGULATORS

The UA7900M, UA7900I, and UA7900C series are three-terminal negative regulators with a fixed output voltage of -5 V , -5.2 V , -12 V and -15 V and up to 1.5 A load current capability.

The UA7900M, UA7900I, and UA7900C series have current limiting which is independent of temperature, combined with thermal overload protection. Internal current limit protection against momentary faults while thermal shut down prevents junction temperature exceeding safe limits during prolonged overloads.

These circuits can deliver over 1.0 A if adequate heatsink is provided. Even with over 1.0 A of output current available, the regulators are essentially blow-out proof. Current limiting is included to limit the peak output current to a safe value. Safe area protection for the output transistor is provided to limit internal power dissipation. If internal power dissipation becomes too high for the heatsink provided, the thermal shutdown circuit takes over preventing the IC from overheating.

These devices need only one external component: a compensation capacitor at the output, making them easy to apply. Worst case guarantees on output voltage deviation due to any combination of line, load or temperature variation assure satisfactory system operation.

The UA7900M, UA7900I and UA7900C series of three terminal regulators are available with several fixed output voltages making them useful in a wide range of applications. One of these is local on card regulation, eliminating the distribution problems associated with single point regulation. The voltages available allow these regulators to be used in logic systems, instrumentation, HiFi, and other solid state electronic equipments. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.

The UA7900M series are available in metal TO-3.

The UA7900I, C are available in plastic TOP-3 and in metal TO-3 packages.

- Output voltage tolerance without external trimming: UA7900C, I series: $\pm 4\%$; 7900M series: $\pm 2\%$.
- Preset current limit
- Output current in excess of 1 A
- Internal thermal shut down
- Operates with input-output voltage differential down to 2 V
- Load regulation:
 - UA7900C, I: 80 mV
 - UA7900M: 50 mV

ORDERING INFORMATION

Hi-Rel versions available - See chapter 14

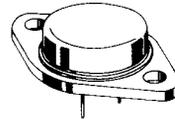

PART NUMBER	TEMPERATURE RANGE	PACKAGE	
		K	SP3
UA7905C	0°C to $+150^{\circ}\text{C}$	•	•
UA7905I	-25°C to $+150^{\circ}\text{C}$	•	•

TYPICAL APPLICATIONS

FIXED OUTPUT REGULATOR

- * Required if regulator is located an appreciable distance from power supply filter.
 - ** Required for stability for value given.
- For output capacitance in excess of 100 μF, a high current diode from input to output (1N4001) will protect the regulator from momentary input shorts.

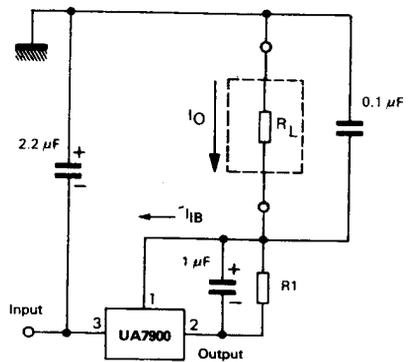

ADJUSTABLE OUTPUT REGULATOR

$$V_O = V_{set} \frac{R_1 + R_2}{R_2}$$

UA7905 : R2 = 300 Ω
 UA7912 : R2 = 750 Ω
 UA7915 : R2 = 1 kΩ

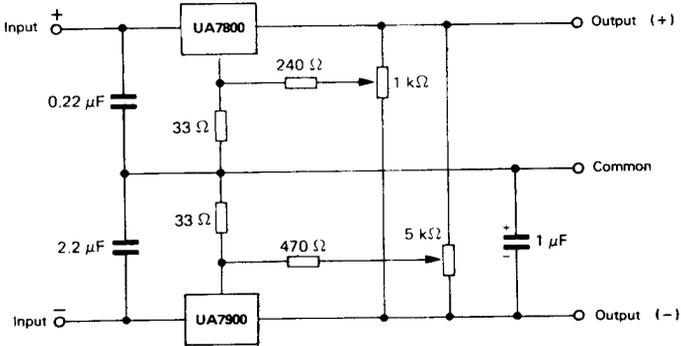

CURRENT REGULATOR

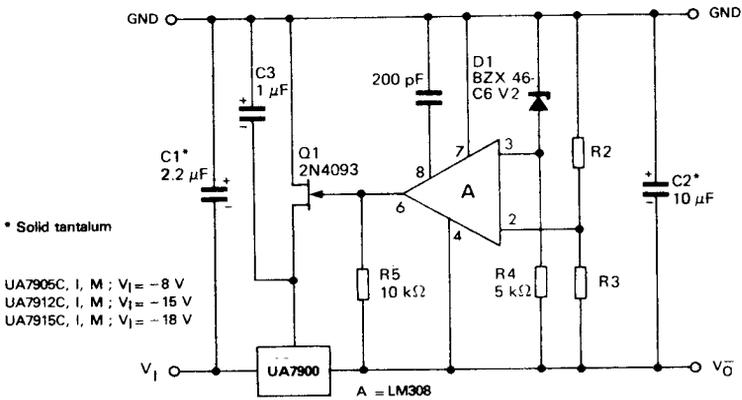

$$I_O = \frac{V(2-1)}{R_1} + I_{IB}$$

TYPICAL APPLICATIONS (continued)

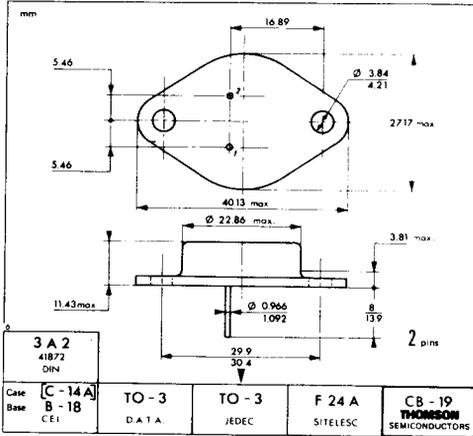

DUAL TRIMMED SUPPLY

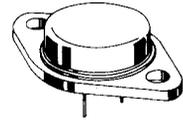

HIGH STABILITY 1 A REGULATOR

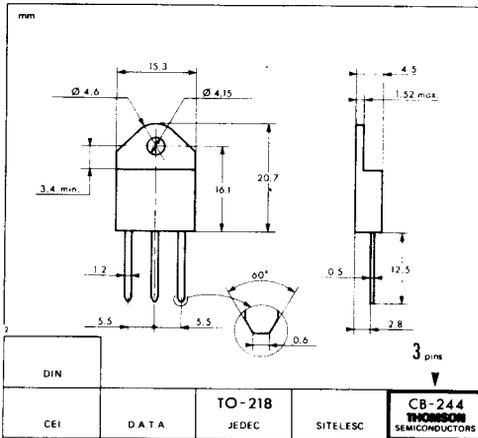

Load and line regulation < 0.01 %
 Temperature stability < 0.1 %
