

# UT63M1XX MIL-STD-1553A/B Bus Transceiver

## Data Sheet

Sept. 1999

### FEATURES

- ❑ Full conformance to MIL-STD-1553A and 1553B
- ❑ Completely monolithic bipolar technology
- ❑ Low power consumption
- ❑ Fit and functionally compatible to industry standard 631XX series
- ❑ Idle low encoding version
- ❑ Flexible power supply voltages:  $V_{CC}=+5V$ ,  $V_{EE}=-12V$  or  $-15V$ , and  $V_{CCA}=+5V$  to  $+12V$  or  $+5V$  to  $+15V$
- ❑ Full military operating temperature range,  $-55^{\circ}C$  to  $+125^{\circ}C$ , screened to QML Q or QML V requirements
- ❑ Standard Military Drawing available

### INTRODUCTION

The monolithic UT63M1XX Transceivers are complete transmitter and receiver pairs conforming fully to MIL-STD-1553A and 1553B. Encoder and decoder interfaces are idle low. UTMC's advanced bipolar technology allows the positive analog power to range from +5V to +12V or +5V to +15V, providing more flexibility in system power supply design.

The receiver section of the UT63M1XX series accepts biphasemodulated Manchester II bipolar data from a MIL-STD-1553 data bus and produces TTL-level signal data at its RXOUT and  $\overline{RXOUT}$  outputs. An external RXEN input enables or disables the receiver outputs.

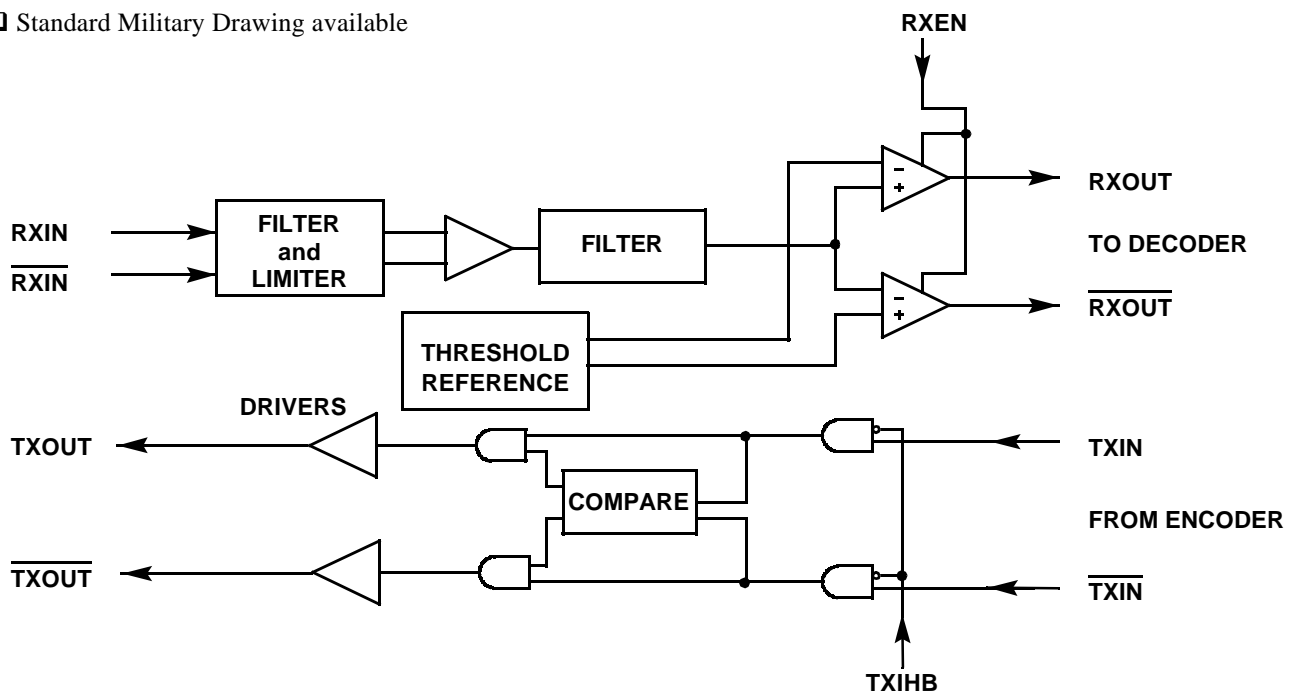

Figure 1. Functional Block Diagram

The transmitter section accepts biphasic TTL-level signal data at its TXIN and  $\overline{\text{TXIN}}$  and produces MIL-STD-1553 data signals. The transmitter's output voltage is typically  $42V_{PP}$ , L-L. Activating the TXIHB input or setting both data inputs to the same logic level disables the transmitter.

The UT63M1XX series offers a monolithic transmitter and receiver packaged in either single channel (24-pin) or dual-channel (36-pin) configurations designed for use in any MIL-STD-1553 application.

**Legend for TYPE field:**

- TI = TTL input
- TO = TTL output
- DO = Differential output
- DI = Differential input
- () = Channel designator

**TRANSMITTER**

NAME	PACKAGE PIN		TYPE	DESCRIPTION
	SINGLE	DUAL		
TXOUT (A)	1	1	DO	Transmitter outputs: TXOUT and TXOUT are differential data signals.
TXOUT (B)	N/A	10	DO	
$\overline{\text{TXOUT}}$ (A)	2	2	DO	$\overline{\text{TXOUT}}$ is the complement of TXOUT.
$\overline{\text{TXOUT}}$ (B)	N/A	11	DO	
TXIHB (A)	21	34	TI	Transmitter inhibit: this is an active high input signal.
TXINB (B)	N/A	25	TI	
TXIN (A)	22	35	TI	Transmitter inputs: TXIN and TXIN are complementary TTL-level Manchester II encoder inputs.
TXIN (B)	N/A	26	TI	
$\overline{\text{TXIN}}$ (A)	23	36	TI	TXIN is the complement of TXIN input.
$\overline{\text{TXIN}}$ (B)	N/A	27	TI	

## RECEIVER

NAME	PACKAGE PIN		TYPE	DESCRIPTION
	SINGLE	DUAL		
RXOUT (A)	7	5	TO	Receiver outputs: RXOUT and $\overline{\text{RXOUT}}$ are complementary Manchester II decoder outputs.
RXOUT (B)	N/A	14	TO	
RXOUT (A)	10	8	TO	$\overline{\text{RXOUT}}$ is the complement of RXOUT output
$\overline{\text{RXOUT}}$ (B)	N/A	17	TO	
RXEN (A)	8	6	TI	Receiver enable/disable: This is an active high input signal.
RXEN (B)	N/A	15	TI	
RXIN (A)	15	29	DI	Receiver inputs: RXIN and $\overline{\text{RXIN}}$ are biphas-modulated Manchester II bipolar inputs from MIL-STD-1553 data bus.
RXIN (B)	N/A	20	DI	
RXIN (A)	16	30	DI	$\overline{\text{RXIN}}$ is the complement of RXIN input.
$\overline{\text{RXIN}}$ (B)	N/A	21	DI	

## POWER AND GROUND

NAME	PACKAGE PIN		TYPE	DESCRIPTION
	SINGLE	DUAL		
V <sub>CC</sub> (A)	20	33	PWR	+5V <sub>DC</sub> power ( $\pm 10\%$ )
V <sub>CC</sub> (B)	N/A	24	PWR	
V <sub>CCA</sub> (A)	13	28	PWR	+5 to +12V <sub>DC</sub> power or +5 to +15V <sub>DC</sub> power ( $\pm 5\%$ )
V <sub>CCA</sub> (B)	N/A	19	PWR	
V <sub>EE</sub> (A)	19	32	PWR	-12 or -15V <sub>DC</sub> power ( $\pm 5\%$ ) Recommended de-coupling capacitors 4.7 $\mu$ F and 1 $\mu$ F
V <sub>EE</sub> (B)	N/A	23	PWR	
GND (A)	3, 9, 18	3, 7, 31	GND	Ground reference
GND (B)	N/A	12, 16, 22	GND	

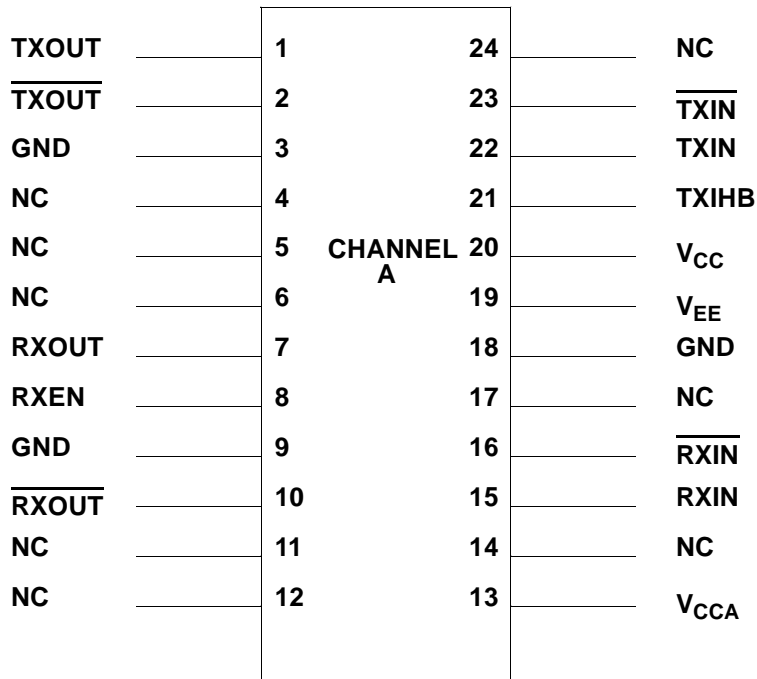

Figure 2a. Functional Pin Diagram--Single Channel

Figure 2b. Functional Pin Diagram--Dual Channel

## TRANSMITTER

The transmitter section accepts Manchester II biphasе TTL data and converts this data into differential phase-modulated current drive. Transmitter current drivers are coupled to a MIL-STD-1553 data bus via a transformer driven from the TXOUT and  $\overline{\text{TXOUT}}$  terminals. Transmitter output terminals' non-transmitting state is enabled by asserting TXIHB (logic 1), or by placing both TXIN and  $\overline{\text{TXIN}}$  at the same logic level. Table 1, Transmit Operating Mode, lists the functions for the output data in reference to the state of TXIHB. Figure 3 shows typical transmitter waveforms.

## RECEIVER

The receiver section accepts biphasе differential data from a MIL-STD-1553 data bus at its RXIN and  $\overline{\text{RXIN}}$  inputs. The receiver converts input data to biphasе Manchester II TTL format and is available for decoding at the RXOUT and  $\overline{\text{RXOUT}}$  terminals. The outputs RXOUT and  $\overline{\text{RXOUT}}$  represent positive and negative excursions (respectively) of the inputs RXIN and  $\overline{\text{RXIN}}$ . Figure 4 shows typical receiver output waveforms.

Models UT63M105, UT63M107, UT63M125, and UT63M127 idle in the "0" state when disabled or receiving no signal.

## POWER SUPPLY VOLTAGES

The UT63M1XX series meets device requirements over a wide range of power supply voltages. Table 2 shows the overall capabilities of all available devices. Each channel of the dual transceiver is electrically and physically separate from the other and fully independent, including all power and signal lines. Thus there will be no interaction between the channels.

Figure 3. Typical Transmitter Waveforms

Table 1. Transmit Operating Mode

TXIN	$\overline{\text{TXIN}}$	TXIHB	TXOUT
x <sup>1</sup>	x	1	Off <sup>2</sup>
0	0	x	Off <sup>3</sup>
0	1	0	On
1	0	0	On
1	1	x	Off <sup>3</sup>

**Notes:**

1. x = Don't care.
2. Transmitter output terminals are in the non-transmitting mode during Off time.
3. Transmitter output terminals are in the non-transmitting mode during Off time, independent of TXIHB status.

## DATA BUS INTERFACE

The designer can connect the UT63M1XX to the data bus via a short-stub (direct-coupling) connection or a long-stub (transformer-coupling) connection. Use a short-stub connection when the distance from the isolation transformer to the data bus does not exceed a one-foot maximum. Use a long-stub connection when the distance from the isolation transformer exceeds the one-foot maximum and is less than twenty-five feet. Figure 5 shows various examples of bus coupling configurations. The UT63M1XX series transceivers are designed to function with MIL-STD-1553A and 1553B compatible transformers.

## RECOMMENDED THERMAL PROTECTION

All packages, single and dual, should mount to or contact a heat removal rail located in the printed circuit board. To insure proper heat transfer between the package and the heat removal rail, use a thermally conductive material between the package and the heat removal rail. Use a material such as Mereco XLN-589 or equivalent to insure heat transfer between the package and heat removal rail.

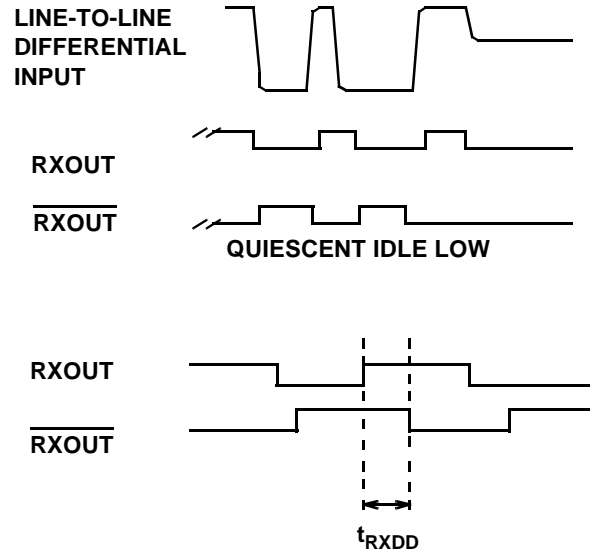

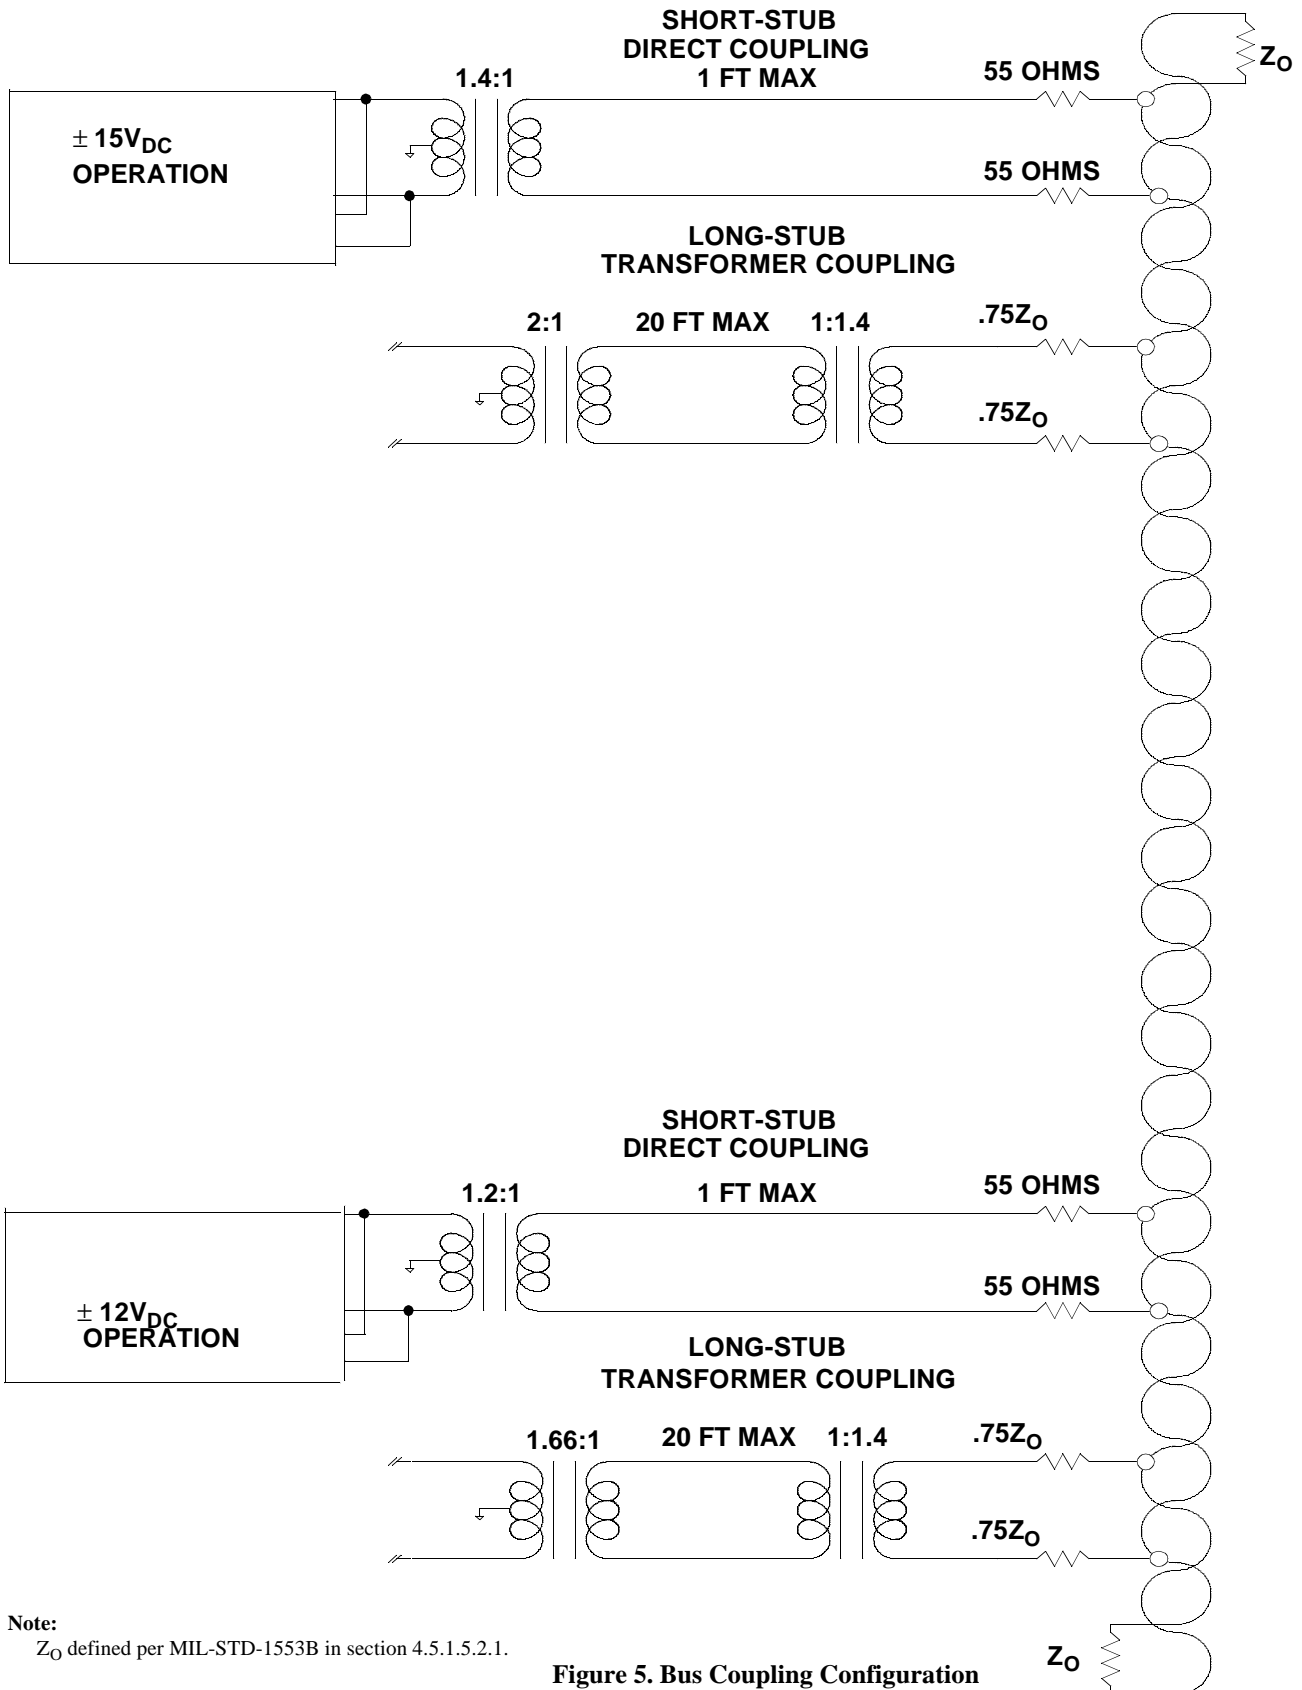

Figure 4. Typical Receiver Waveforms

Table 2. Transceiver Model Capabilities

MODEL	V <sub>CC</sub>	V <sub>EE</sub>	V <sub>CCA</sub>	IDLE
UT63M105	+5V	-15V	+5 to +15V	Low
UT63M107	+5V	-12V	+5 to +12V	Low
UT63M125	+5V	-15V	+5 to +15V	Low
UT63M127	+5V	-12V	+5 to +12V	Low

Note:  
 $Z_0$  defined per MIL-STD-1553B in section 4.5.1.5.2.1.

Figure 5. Bus Coupling Configuration

Figure 6. Direct-Coupled Transceiver with Load

Notes:

1. TP = Test point.
2.  $R_L$  removed for terminal input impedance test.
3. TX and RX tied together.

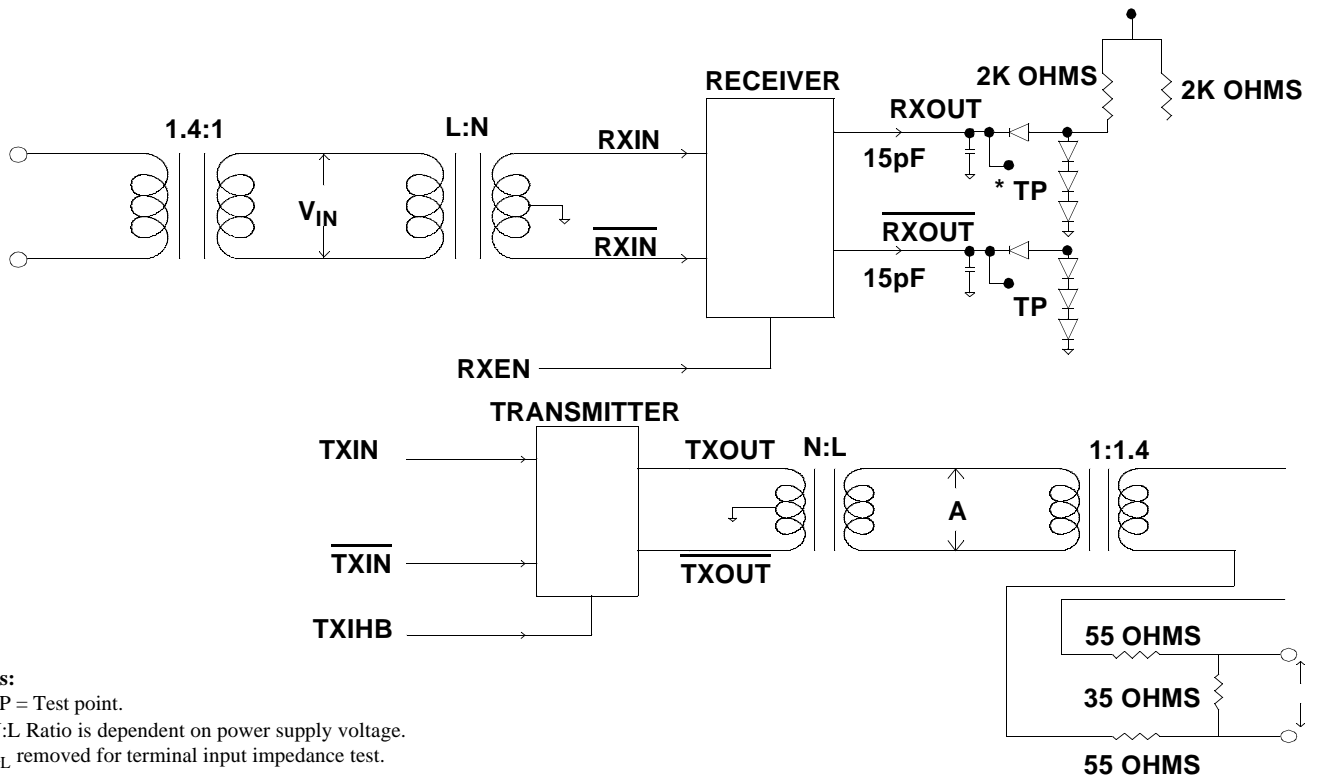

Figure 7. Transformer-Coupled Transceiver with Load

Notes:

1. TP = Test point.
2. N:L Ratio is dependent on power supply voltage.
3.  $R_L$  removed for terminal input impedance test.
4. TX and RX tied together.

**Notes:**

Transformer-Coupled Stub:

Terminal is defined as transceiver plus isolation transformer. Point A defined in figure 7.

Direct-Coupled Stub:

Terminal is defined as transceiver plus isolation transformer and fault resistors. Point A defined in figure 6.

**Figure 8. Transceiver Test Circuit MIL-STD-1553B**

**ABSOLUTE MAXIMUM RATINGS<sup>1</sup>**

(Referenced to  $V_{SS}$ )

SYMBOL	PARAMETER	LIMITS	UNIT
$V_{CC}$	Supply Voltage	7.0	V
$V_{EE}$	Supply Voltage	-22	V
$V_{CCA}$	Supply Voltage	+22	V
$V_{IN}$	Input Voltage Range (Receiver)	42	$V_{PP}$ , L-L
$V_{IN}$	Logic Input Voltage	-0.3 to +5.5	V
$I_O$	Output Current (Transmitter)	190	mA
$P_D$	Power Dissipation (per Channel)	4	W
$Q_{JC}$	Thermal Impedance, Junction-to-Case	6 <sup>2</sup>	°C/W
$T_J$	Operating Temperature, Junction	-55 to +150	°C
$T_C$	Operating Temperature, Case	-55 to +125	°C
$T_{STG}$	Storage Temperature	-65 to +150	°C

**Notes:**

1. Stress outside the listed absolute maximum rating may cause permanent damage to the devices. This is a stress rating only, and functional operation of the device at these or any other conditions beyond limits indicated in the operational sections of this specification is not recommended. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. Mounting per MIL-STD-883, Method 1012.

**RECOMMENDED OPERATING CONDITIONS**

PARAMETER	LIMITS	UNIT
Logic input voltage range	0 to +5.0	V
Receiver differential voltage	9.0	$V_{P-P}$
Driver peak output current	180	mA
Serial data rate	0.1 to 1	MHz
Case operating temperature range ( $T_C$ )	-55 to +125	°C

## DC ELECTRICAL CHARACTERISTICS

$V_{CC} = +5V (\pm 10\%)$

$V_{CCA} = +5V \text{ to } +12V (\pm 5\%) \text{ or } +5V \text{ to } +15V (\pm 5\%)$

$V_{EE} = -12V \text{ or } -15V (\pm 5\%)$

$-55^{\circ}C < T_C < +125^{\circ}C$

SYMBOL	PARAMETER	MINIMUM	MAXIMUM	UNIT	CONDITION
$V_{IL}$	Input Low Voltage		0.8	V	RXEN, TXIHB, TXIN, $\overline{\text{TXIN}}$

# ORDERING INFORMATION

## UT63M Single Channel MIL-STD-1553 Monolithic Transceiver: SM

5962 \* \* \* \* \*

**Notes:**

1. Lead finish (A, C, or X) must be specified.
2. If an "X" is specified when ordering, part marking will match the lead finish and will be either "A" (solder) or "C" (gold).
3. RadHard offered only on 01 device type. Cobalt 60testing required.
4. For QML Q product, the Q designator is intentionally left blank in the SMD number (e.g. 5962-8864401UX).

## UT63M Single Channel MIL-STD-1553 Monolithic Transceiver

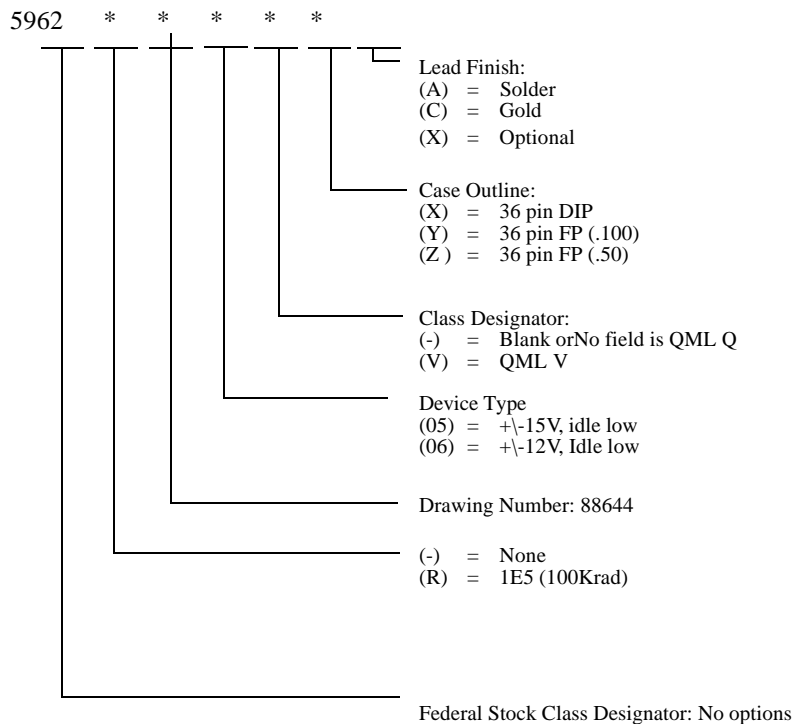

### Notes:

1. Lead finish (A, C, or X) must be specified.
2. If an "X" is specified when ordering, part marking will match the lead finish and will be either "A" (solder) or "C" (gold).
3. Military Temperature range devices are burned-in and are tested at -55°C, room temperature, and 125°C. Radiation characteristics are neither tested nor guaranteed and may not be specified.
4. Devices have prototype assembly and are tested at 25°C only. Radiation characteristics are neither tested nor guaranteed and may not be specified. Lead finish is at UTMC's option and an "X" must be specified when ordering.
5. The 63M105 only may be ordered with 1E5 rads(Si) total dose. Co60 testing is required. Contact factory for details.
6. SEU and neutron irradiation limits will be added when available.

# ORDERING INFORMATION

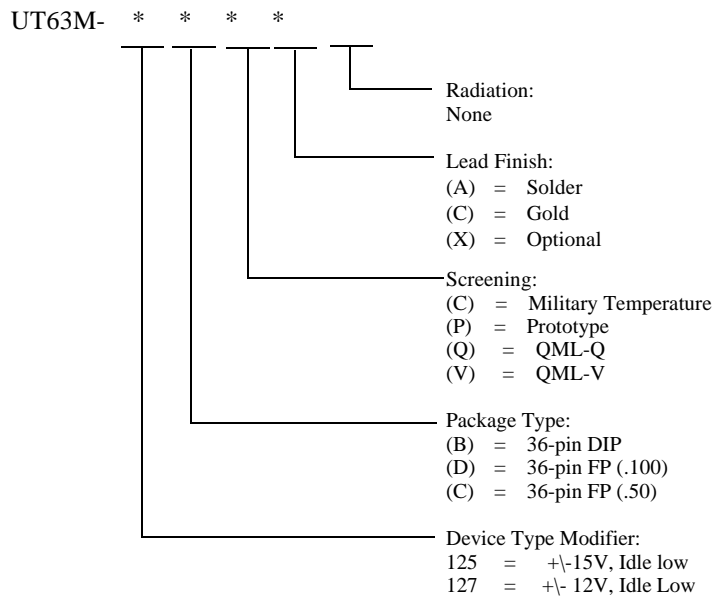

## UT63M Dual Monolithic Transceiver: SMD

### Notes:

1. Lead finish (A, C, or X) must be specified.
2. If an "X" is specified when ordering, part marking will match the lead finish and will be either "A" (solder) or "C" (gold).
3. RadHard offered only on 05 device type. Cobalt 60 testing required.
4. For QML Q product, the Q designator is intentionally left blank in the SMD number (e.g. 5962-8864405YX).

## UT63M Dual Multichip Monolithic Transceiver

### Notes:

1. Lead finish (A, C, or X) must be specified.
2. If an "X" is specified when ordering, part marking will match the lead finish and will be either "A" (solder) or "C" (gold).
3. Military Temperature range devices are burned-in and tested at -55°C, room temperature, and 125°C. Radiation characteristics are neither tested nor guaranteed and may not be specified.
4. Devices have prototype assembly and are tested at 25°C only. Radiation characteristics are neither tested nor guaranteed and may not be specified. Lead finish is GOLD only.
