## Description

The XC95216 is a high-performance CPLD providing advanced in-system programming and test capabilities for general purpose logic integration. It is comprised of twelve 36V18 Function Blocks, providing 4,800 usable gates with propagation delays of 10 ns. See Figure 2 for the architecture overview.

## Power Management

Power dissipation can be reduced in the XC95216 by configuring macrocells to standard or low-power modes of operation. Unused macrocells are turned off to minimize power dissipation.

Operating current for each design can be approximated for specific operating conditions using the following equation:

$$I_{CC} \text{ (mA)} = MC_{HP} (1.7) + MC_{LP} (0.9) + MC (0.006 \text{ mA/MHz}) f$$

Where:

$MC_{HP}$  = Macrocells in high-performance mode

$MC_{LP}$  = Macrocells in low-power mode

$MC$  = Total number of macrocells used

$f$  = Clock frequency (MHz)

Figure 1 shows a typical calculation for the XC95216 device.
